Consent Audit Assessment

Discover Whether Your Website Honors Consent Preferences Every Time.

Free Consent Audit Assessment for Your Public-Facing Website

Scripts on your site can overwrite the consent preferences your platform records. When that happens, trackers load before the consent banner appears or keep collecting data after a visitor clicks Reject, but **the consent log shows a compliant visit anyway**. The Feroot Consent Audit Assessment loads your live site the way a visitor would and finds where its behavior conflicts with your policies and regulations. Then we meet with your team to go through the results.

- **No cost**
- No installation
- No code changes
- Only publicly available information
- Works with your existing CMP

What the Assessment Checks

We test each page four ways: with no consent action, after Accept All, after Reject All, and with the Global Privacy Control signal on.

Consent Enforcement

Do trackers fire before consent, or keep collecting after a visitor opts out?

Scripts and Trackers

Every script, pixel, tag, and cookie on your site, from first to fourth party, and what each does.

Data Flows

PII sent to third parties, access to sensitive fields, and cross-border transfers.

Regulatory Exposure

Which findings create risk under GDPR, CCPA/CPRA, CIPA, HIPAA, or any of 70+ other laws.

About DXComply

70+ laws and frameworks

The assessment shows your site on one day. DXComply runs the same audit continuously. AI agents test every website page and mobile app screen in every consent state, map where data goes, and send findings in priority order to the tools your teams already use, with dated evidence for counsel. It runs alongside your existing CMP.

What to Expect

1

Tell Us Your Scope

Tell us which site to assess and which regulations and jurisdictions apply to you.

2

Feroot Runs the Audit

AI agents load your pages as a first-time visitor. Nothing touches your systems.

3

Findings Meeting

A Feroot specialist goes through the results with your team and helps set priorities.

4

Decide Next Steps

Fix what the plan lists, or keep every page under continuous audit with DXComply.

Inside the Findings Meeting

We run it as a working session on your own results, with your consent platform and the laws you selected in mind.

What We Cover Together

1. **Summary.** What fired, when, and under which consent state, ranked by severity.
2. **Walkthrough.** We go through each finding with the vendor and page involved and what set it off.
3. **Regulations.** Where each finding creates legal exposure.
4. **Root causes.** How scripts get around your CMP, for example through tag-manager drift or by loading ahead of the banner.
5. **Plan and questions.** We agree on what to fix first and who owns each fix, then take your team's questions.

Who Should Attend

Privacy, legal, GRC, compliance, and security leads, plus the marketing and web people who manage your tags, since most fixes land on them.

You Leave With

- A findings report you can share internally
- Evidence of what each page did in each consent state
- A remediation plan, highest risk first
